1. Purpose of Document

The Functional Requirement Specification (FRS) is a document that provides detailed information on how the system solution will function and the requested behavior. This document is created based on the high-level requirements identified in the Business Requirements Document and provides traceability on the functional specifications back to the business requirements. Included in this document will be the detailed functional requirements including business cases, system inputs, outputs, logical system, and data source.

2 Batch Query Life Cycle

2.1 Process Flow

2.1 Process Details

- **Purpose of function:** Credit control team easy to check the subscriber's life cycle many numbers with this function. Because currently Credit Control team check life cycle subscriber one by one in system NGBSS.
